

Running a family, made easy(er).

Foodoodle makes running a family easier, built around dinner: the meal plan, a family calendar with chores, grocery lists and favorites in one shared place the whole household can see — on iPhone, Android, and desktop. It runs in the browser and can be added to a phone's home screen; it is not an app-store download.

At a glance

Company	Foodoodle — Black-owned software company from Pensy Group
Founder	Jonathan Duhon
Based in	Tulsa, Oklahoma
Pricing	Free for everyone until November 4, 2026; then a 7-day free trial and \$19.99 a month or \$179.99 a year per household. Free for one login without the plan
Works on	iPhone, Android and desktop, in the browser
Website	foodoodle.com

Why now

The Mealime meal-planning app shuts down October 21, 2026. Per Mealime's own closing notice (mealime.com/closing), users' personal data will be deleted — only its recipe catalog moves to parent company Albertsons' Meals Hub. Mealime's Google Play listing invites users to join over 5,000,000 people who have used the app. Foodoodle is a free place for Mealime families to land.

How it works

- Setup takes about ten minutes; the weekly plan takes about four.
- Everyone votes on meals from their phone; one planner makes the final call.
- The grocery list builds itself from the week's meals minus what's already in the house, grouped by aisle.
- Snap the receipt and the list ticks items off.
- Save recipes from any link or scan cookbook pages — households start from the meals they already cook.
- Kids are profiles a parent manages, or get their own login and check off their own chores.
- Allergy and dietary-restriction conflicts are flagged, with a one-tap swap — a helper, not a guarantee; keep reading labels.
- Works with the AI assistants families already use (ChatGPT, Claude) through the open MCP standard at foodoodle.com/assistants. The assistant inherits the signed-in member's household permissions.
